

Gifted Referral Process

Specific Academic Aptitude / General Intellectual Ability

Teachers, parents, or students may initiate referrals for gifted identification assessment at any time throughout the school year, using information from a variety of sources, including:

- Test data
- MTSS/RtI data
- Universal Screening data (2nd and 6th grades)
- Student performance and observations
- Anecdotal records, questionnaires or interviews
- Gifted identification or services in a previous school/district

A referral made for possible gifted identification does **not** necessarily lead to the automatic administration of specific assessments. The identification team will carefully consider the referral, examine current student assessment data and determine appropriate next steps. This may or may not include administering additional tests.
